

# CONSTRUCTION 911 NEWS

ISSUE #104

JUNE 2010

Announcing a new service . . .

## ASBESTOS ABATEMENT

Construction 911 is now licensed and certified by the State of California to perform asbestos abatement. We have educated and trained our technicians to the highest industry standards and strictly adhere to the laws and regulations concerning containment, removal and disposal of asbestos-containing materials. In particular, we follow the regulations set forth by OSHA (Department of Labor Occupational Safety & Health Act), the EPA (Environmental Protection Agency) and the SCAQMD (Southern California Air Quality Management District). A thorough testing process also ensures that properties are safe and ready for return.

Adding asbestos abatement to our range of services elevates Construction 911 to a truly "full-service" company. We can now manage your losses from start to finish, from the first emergency call, to remediation and abatement, to finishing up the final touches on reconstruction.

Please call our office for more information or to set up an appointment for an estimate.

Don't forget to check us out on the web!

Who hasn't heard . . . ?

. . . about the torrential rains experienced this winter in the burn areas of La Crescenta & La Canada (right in our own backyard).

Construction 911 was happy to come to the rescue of **St. George's Preschool in La Canada** after a flood left the entire lower level of their building unusable. The children are now back in their classrooms as if nothing ever happened!

Have you heard . . . ?

. . . about the new regulations regarding lead removal? Effective April 27, 2010, the EPA has issued a new rule regarding lead renovation, repair & painting.

Rule 40 CFR 745 states that all companies working in pre-1978 homes and child-occupied facilities must be certified and use lead-safe work practices during renovations.

Construction 911 has been certified under this rule and will perform all work according to these new requirements.
